

TruthLens AI

Verify Before You Trust

AI-Powered Misinformation & Deepfake Detection Platform

Team TruthLens AI

Suvasini • CSE, CMR University, Bengaluru

Bharat Academix CodeQuest 2026

The Problem

Misinformation spreads faster than truth

1

Viral Fake News

Fabricated stories spread across platforms in minutes, faster than fact-checkers can respond.

2

Deepfake Media

AI-generated images and videos blur the line between real and synthetic content.

3

Low Public Trust

Audiences struggle to distinguish credible journalism from manipulated content.

4

No Quick Verification

Most users have no easy, transparent way to check a story before sharing it.

Our Solution

TruthLens AI — one platform, instant verification

A unified AI platform that verifies text, source URLs and images, returns an explainable trust score, and generates a downloadable PDF verification report.

Multi-Modal Verification

Analyzes text credibility, source URL & image authenticity in one flow.

Explainable AI

Shows WHY content is suspicious — not just a number.

Instant Trust Score

0–100 score with Low / Medium / High risk classification.

PDF Verification Report

One-click downloadable, timestamped audit trail.

ASEEV Verification Framework

Our unique 5-step methodology

Analyze Content

Analyze text, source URLs and images.

Score Credibility

Generate a trust score from 0–100.

Evaluate Risk

Classify as Low, Medium or High Risk.

Explain Findings

Transparent reasoning behind every result.

Verify Information

Assess source reliability and generate a report.

Output: Professional PDF Verification Report

System Architecture

End-to-end verification pipeline

Note: Future Enhancements: MongoDB-based source reputation database and Transformer-powered NLP analysis.

Live Features & Tech Stack

What works in the demo today

Live Features

- Text & URL credibility analysis
- Trust Score (0–100) with risk level
- Explainable AI verdicts & reasons
- ASEEV framework workflow
- PDF Verification Report
 - One-click report download
 - Timestamped verification
 - Professional audit trail
- Trust Heatmap (Authenticity & Credibility)

Tech Stack

Frontend	React + Vite
Backend	FastAPI (Python) verification API
AI Engine	ASEEV rule-based scoring engine
Reports	Client-side PDF generation
Planned	MongoDB · Transformers · Sentiment AI

Live Prototype

Real screenshots from the working demo

Live Prototype

Fake URL test result

TruthLens AI Verification Report

Generated: 22/6/2026, 1:21:44 pm

Trust Score: 10/100

Risk Level: High

AI Confidence: 87%

Source Credibility: Low

Source URL: https://fakebreakingnews.xyz

Reasons:

- Breaking News Phrase Detected
- Viral Propagation Pattern Detected
- Unverified Secret Claim Detected

Downloadable PDF Verification Report

Competitive Advantage

What makes TruthLens different

Downloadable Verification Reports (PDF)

ASEEV Verification Framework

Source Credibility Analysis

Explainable AI Reasoning

Multi-Modal: text + URL + image

Instant trust score & risk level

Demo Flow

User journey through ASEEV

Market Opportunity

Who benefits from TruthLens AI

Students & Researchers

Verify sources before citing in academic work.

Journalists & Editors

Quick credibility check on tips & viral claims.

NGOs & Public Orgs

Counter misinformation campaigns at scale.

Everyday Readers

Decide what to trust before sharing on social media.

Roadmap

From prototype to production

Phase 1 — Now

- ASEEV rule-based engine
- Trust score & risk level
- PDF verification report

Phase 2 — Next

- Transformer-based NLP
- Source reputation DB (MongoDB)
- Browser extension

Phase 3 — Vision

- Deepfake face detection
- AI fact verification
- Multilingual support

Expected Impact & Benefits

Benefits

- Reduces the spread of misinformation
- Encourages responsible content sharing
- Improves digital and media literacy
- Enables rapid credibility assessment
- Provides transparent AI-driven explanations
- Generates downloadable verification reports for auditing

Thank You

Verify Before You Trust
